

MHL-7-18W-6IN1

7X18W RGBWA+UV 6IN1 LED BEAM MOVING HEAD

Extremely bright (about 14000Lux max), precise and rapid in movements, this beam moving head is a must for all types of installations and stages. The 35° emission angle and the 6in1 LED technology also make it suitable for a wide range of beam applications. Not only that but the possibility to adjust both fan speed - according to the internal temperature - and white balance make it compatible with theatrical applications where both aspects are crucial. DMX control is 11 or 15 channels. In addition, there are Sound, DMX Master/Slave, and Automatic modes for maximum ease of use.
