JASPER DNCE-ACS

CUTAWAY ACOUSTIC GUITAR WITH PREAMP

Inspired by one of Canada's most picturesque parks, the **JASPER** is an acoustic guitar that combines wood selection, luthiery and sound. Its solid **spruce top** paired with **mahogany** back and sides provides projection and resonance, while the **rosewood** used on the fingerboard and bridge embellishes the instrument by raising its quality level.

The amplification section is delegated to a **Fishman GT-1**, while the tuning machines are **Grover**. The JASPER series is available as a dreadnought cutway in three **gloss finishes** (Natural, Sunburst and Aged Cherry Sunburst).
