

STUDIOPAD5

Pair of foam pads for 5" Studio Monitors

Studio monitors are the most important and critical part of your recording studio, computer music or audio/video post-production workstation. They “translate” your work into sound pressure and convey your work in acoustic terms. To avoid unwanted “contamination” coming from surfaces in contact with the monitors (vibrations and resonances) it is necessary to isolate them. Soundsation STUDIOPAD5 is the ideal solution to these problems. Each set consists of a pair of foam insulators with rectangular base. Each insulator is made up of 2 slanting sections. By combining the two sections in different ways, you can get different angles.

KEY FEATURES

Ideal for acoustic decoupling of studio monitors

2 different angles (in addition to 0°)	3.3°, 7.1°
Load-bearing capacity per pad	12 kg
Color	Anthracite
Dimension (WxDxH)	180x300x40mm
Package consist of 2 Pads
